Re: *Notice of Ex Parte Presentation* – WT Docket No. 10-112

Dear Ms. Dortch:

On May 24, 2011, Fred Campbell, President of the Wireless Communications Association International, Inc., met with Kathy Harris, Richard Arsenault, John Schauble, Michael Connelly, Stephen Buenzow, and Zhi Li, all of whom are in the Wireless Telecommunications Bureau at the Federal Communications Commission.

The parties discussed a substantial service safe harbor for the area-licensed millimeter wave bands. The safe harbor would require that licensees offer a viable, competitive backhaul option to commercial service providers and government users. The following criteria would be used to determine whether an area-licensed millimeter wave band licensee is offering a viable, competitive backhaul option on a carrier's carrier basis: (1) it offers its backhaul services or spectrum leases to commercial fixed and mobile service providers or government spectrum users; (2) it is actively marketing its services and leasing opportunities to commercial fixed and mobile service providers or government spectrum users; (3) it offers equipment capable of meeting the backhaul requirements of commercial fixed and mobile service providers or government spectrum users; and (4) it offers its backhaul services or spectrum leases on commercially reasonable terms and conditions.

Copies of this letter are being sent to the participants via email.

Sincerely,

Fred B. Campbell, Jr.
President and CEO
